Eclisse Pocket Door Frames

- The most quality pocket door system on the market. Frames are all galvanized steel, and no longer use wood components.
- Made in Italy of the finest quality components and an industry leading 12 year warranty.
- Available with a soft closer and a soft closer “both directions”.
- Thanks to Self-Closing System, once opened, the door closes itself automatically!
- The Double Door Co-ordination kit allows the simultaneous opening and closing of the doors, by only moving one of them.
- Kentucky Wholesale Stocks 6/8 and 8/0 frames, along with the soft closers, self-closing system and the Double Door Co-ordination kits.

A&F WOOD POCKET DOOR FRAMES

- Aluminum Jump-Proof Track System
- Steel Reinforced Spreaders
- Same 3 Wheel Ball Bearing Hardware as KD Universal

Rough Opening Height: Door Height + 4-1/2”
Rough Opening Width: 2 X Door Width, Add 2”
RECOMMENDED INSTALLATION INSTRUCTIONS FOR PRE-HUNG DOORS

- The rough opening should be at least 1" wider and 1/2" higher than the outside dimensions of the new door frame unit.
- Ensure that the opening is level and plumb.
- Slide the new door unit into the rough opening bottom end first and tilt it into place. Position the door unit in the rough opening so the edges of the jambs are flush with the wallboard.
- Visually center the top jamb in the opening and making sure the hinge side jamb is plumb.
- Level the top jamb and tack it in place using two 4d finishing nails driven partway through the frame and into the header.
- Check the base of the frame to make sure it will fit with the finish flooring. If the finish floor has been installed, the jamb should fit snugly, but not so tight that it bows the frame. If the finish floor has not been installed, measure and mark each side of the frame from the sub floor 1/2" (depending on the thickness of the carpet and pad, tile, or wood floor) and 3/16" for vinyl floor covering. Note: if the thickness of the floor coverings in the adjoining rooms is different, mark and cut each side of the jambs accordingly to accommodate the materials. (i.e. vinyl in one room and tile in the adjoining room).
  - Holding a level along the hinge jamb, drive pairs of wood shims from opposite directions into the space between the jamb and the stud at each hinge point.
  - Drive an 8d finishing nail through the jamb, shims, and partway into the stud at each hinge point. Check for plumb and adjust as necessary.
  - Close door and drive an additional pair of shims in the space between the jamb and the stud at the lockset and then near the top and bottom of the jamb. Check the jamb for plumb.
  - After ensuring that the frame is level and plumb, drive pairs of shims along the side and top jambs so they are spaced every 12". Make sure not to bow the jambs.
  - With a handsaw or utility knife, cut the shims just below the wall surface.
- Position the trim assembly without nailing it. Carefully measure and mark it to match the depth of the floor coverings as with the door frame.
- Remove, cut, and smooth the end cut with sandpaper. Reposition trim and tack in place with 4d finishing nails. Align the trim and nail in place every 16 inches with 4d finishing nails using a nail set to drive nails just below the surface of the wood.

RECOMMENDED PAINTING INSTRUCTIONS FOR MOLDED PANEL DOORS

- Apply top coat in the order as shown, starting with the beading around the panels ensuring to catch any runs, then coat the panels themselves with smooth strokes of the brush following the grain of the wood.
- Next, paint the vertical stiles with smooth vertical strokes following the grain of the door.
- Then coat the horizontal rails using horizontal strokes with the brush.
- Now coat the vertical runs using smooth vertical strokes with the brush, ensuring to leave an even finish where the joints of the horizontal rails meet.
- Finally, coat the edges of the door (F) with smooth vertical strokes, ensuring to catch any runs or build ups of paint on the corners.
- Allow to dry and then rub down the door with fine sandpaper, wipe the door down with a clean cloth to remove any dust, and then apply the second coat in the same manner.
At Kentucky Wholesale we offer a wide range of oak stair fittings and treads as well as primed and iron balusters. Our standard and custom stair components are available in white oak, poplar, black walnut as well as other species and have 1 to 2 week lead time.
